

Activity - 3

(1) Statement and Block

(+) Statement is a Unit of code that performs a specific action, like declaring a variable or performing a calculation.

+ Block is a group of statements enclosed by braces {}.

It is often used to define the scope of variables and to group related statements together.

(2) Input or Output Stream

(+) Input and Output Streams are used in programming to handle the flow of data into and out of a program.

Input Streams are used to read data from a source.

Output Streams are used to write data to a destination.

(3) Standard library:

(+) Is a collection of pre-written code that is included with a programming language. It provides a wide range of functions and classes that can be used to perform common tasks.

(4) Comments

(+) comments are used in programming to add explanatory notes to code.

It can be single-line or multi-line and important tool for making code more readable and maintainable.
